Introduction

Welcome to the MIA Software Vendor Database, one of our initiatives under the MIA Digital Technology Blueprint Operational Plan to realise the vision outlined under the MIA Digital Technology Blueprint.

In 2017 and 2019, MIA conducted a survey on technology adoption by the accountancy profession in Malaysia which include all membership categories – public practice, commerce and industry, public sector and academicians. The survey findings indicated that high business costs were the biggest barrier of adopting technology. Through working group discussions and regular feedback, it was also established that small and medium practices (SMPs) and small and medium enterprises (SMEs) may not necessarily have the time or resources to perform extensive research in looking for a vendor to supply their technology needs.

We have built this database to provide SMPs and SMEs a directory for them to search through to find a vendor that may be able to fulfil their request. This database was built based on extensive research with a specific focus on the five areas identified - accounting, tax, audit, practice management and systems integration. This database can be read together with the MIA Software and Software Vendor Selection Guidance which will help the SMPs and SMEs in choosing a suitable and appropriate software and software vendor. We hope this database will be useful for both SMPs and SMEs.

Disclaimer

MIA does not endorse the products and vendors specifically included in this database and does not present or offer any views or conclusions with respect to such products and vendors. This database is not intended to provide an exhaustive list of all available software products related to accounts production and practice management. Furthermore, it is intended to serve only as a general resource and not as a recommendation in relation to any particular product or range of products, whether or not it is included in the database.

Each user of this database is solely responsible for his/her/the practice's decision/(s) relating to the acquisition, deployment and control of information technology resources, including relevant software solutions. This includes evaluating available options appropriate to his/her/the practice's circumstances, engaging with the vendors listed in this database as deemed necessary, consulting or obtaining advice may be decided and agreeing on the specific terms and conditions of a transaction, contract, service level agreement or the like. The parties involved in a particular instance are solely responsible to negotiate the terms and conditions that will apply to their agreement.

Each user must use the database as information that has been prepared at a particular point in time and as such, they have the responsibility to ensure that they obtain the necessary updated information, as may be required. Every effort has been made to ensure that the information developed for purposes of this database is accurate. Nevertheless, the information provided herein is non-authoritative guidance of the subject matter. As a matter of policy, MIA disclaims responsibility for the materials of this database. Neither the MIA, its Council or any of its Boards or Committees nor its staff shall be responsible or liable for any claims, losses, damages, costs or expenses arising in any way out of or in connection with any persons relying upon the materials provided herein.
